

Pro-plan "churn" in 2025 is *downsizing*, not loss

Zero of 15 Pro accounts fully left Pulseboard in 2025. The cancellations that happened are concentrated in the **\$199 tier within its first 90 days**, while the **\$29 entry tier has never churned**. Four of five cancelling accounts kept an active subscription — the drivers describe which subscriptions get trimmed, not which customers leave.

QUESTION What drives Pro-plan churn in 2025? | POPULATION 15 Pro accounts · 34 subscriptions | CONFIDENCE Medium (small sample)

0 TRUE LOGO EXITS 2025	31% \$199 FIRST-90-DAY HAZARD	24d MEDIAN \$199 CANCEL TENURE	4 / 5 CANCELS KEPT ACTIVE SUB
--	---	--	---

"Churn" depends on how you count it

DEFINITION	RATE	WHAT IT COUNTS
Logo churn (true exit)	7.7%	Accounts that fully left — 1 of 13, in 2024. 0 in 2025.
Subscription churn	21.9%	Canceled subs ÷ (active+canceled) — 7 of 32.
Account-any-cancel	38.5%	Accounts that canceled ≥1 sub — 5 of 13.
Premium-tier sub churn	30.4%	The "\$79+\$199" slice — 7 of 23 (widely quoted).

Driver 1 — Price tier

\$29		0%
\$79		28.6%
\$199		31.3%

\$29 never churns; paid tiers ~30%. RD 30.4pp, Fisher p≈0.15.

Driver 2 — Early \$199 tenure

c. \$199		24d
c. \$79		244d
a. \$199		154d

Median time-to-cancel. \$199 fails fast (4/5 ≤90d); \$79 fails late.

Recommendations

- Target the \$199 first-90-day window** — value-realization CS check-ins at day 30 / 60, where ~31% are lost.
- Reframe internal "Pro churn" reporting** — separate downsizing from logo churn (which is 0 in 2025); a single ~30% figure mis-signals a crisis.
- Review \$199 packaging, not the product** — the same product sells fine at \$29/\$79; the gap is top-price first-quarter value.
- Skip engagement/support churn alerts** — no signal (engagement runs the wrong way: churners were more active).
- Revisit when cancellations accrue** — at n=7 nothing is statistically conclusive.

Caveats

- ! Small sample (7 cancels, 5 in 2025) — descriptive, not significant.
- ! Churn is definition-sensitive (7.7%–38.5%); always pair a rate with its definition.
- ! Durability of "0 true exits" unknown beyond the 2025-06-17 snapshot — key open question.
- ! Engagement coverage-limited (4/7 cancels in window); industry too thin to read (1–3 accounts/vertical).

Seven-phase gated pipeline · ground truth from schema.yml / metrics.yml · price tier = subscriptions.monthly_price · all figures traced to saved CSVs, none invented. Full interactive report: report.html.
